Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

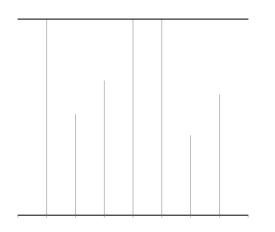

3. The 1.9 k\Omega load represents 1 TTL unit load of 1.6 mA and 5.6 k\Omega pull-up resistor.

4. The 4.1 k\Omega load represents 1 LSTTL unit load of 0.36 mA and 6.1 kΩ pull–up resistor.

5. Common mode transient immunity in logic high level is the maximum tolerable (positive) dV<sub>cm</sub>/dt on the leading edge of the common mode pulse signal V<sub>CM</sub>, to assure that the output will remain in a logic high state (i.e., V<sub>O</sub> > 2.0 V). Common mode transient immunity in logic low level is the maximum tolerable (negative) dV<sub>cm</sub>/dt on the trailing edge of the common mode pulse signal, V<sub>CM</sub>, to assure that the output will remain in a logic low state (i.e., V<sub>O</sub> < 0.8 V).</p>

6. Device is considered a two terminal device: pins 1, 2, 3 and 4 are shorted together and pins 5, 6, 7 and 8 are shorted together.
