# 5 V ECL +2 Divider

# MC10EL32, MC100EL32

### **Description**

The MC10EL/100EL32 is an integrated  $\div 2$  divider. The differential clock inputs and the  $V_{BB}$  allow a differential, single-ended or AC coupled interface to the device. The  $V_{BB}$  pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to  $V_{BB}$  as a switching reference voltage.  $V_{BB}$  may also rebias AC coupled inputs. When used, decouple  $V_{BB}$  and  $V_{CC}$  via a 0.01  $\mu F$  capacitor and limit current sourcing or sinking to 0.5 mA. When not used,  $V_{BB}$  should be left open.

The reset pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flop will attain a random state; the reset allows for the synchronization of multiple EL32's in a system.

The 100 Series contains temperature compensation.
